Summary

Backend Developer experienced in REST APIs and backend services using JavaScript, TypeScript, NestJS, Node.js, Prisma, and PostgreSQL. Skilled in API development, database design, authentication, validation, integrations, and scalable backend architecture.

Education

Acharya Institute of Technology — Bengaluru, India

Bachelor of Engineering in Computer Science (GPA: 8.08/10.0)

Experience

Backend + Technical Interviewer Intern 06/2025 – Present

Newton School of Technology — Bangalore, India

- Conducted 430+ technical and academic interviews, evaluating candidates across Data Structures & Algorithms, programming fundamentals, problem-solving, and technical aptitude.
- Supported the maintenance and operational reliability of the online proctoring platform, troubleshooting issues affecting interview and assessment workflows.
- Contributed to maintaining the interview management product, collaborating with academic and technical teams to improve scheduling, candidate assessment, and interview execution.

Software Engineer Intern 07/2024 – 04/2025

Dhyana Arc Creation LLP — Puducherry, India | Remote

- Developed and maintained backend APIs and services for Dhyana Stays using NestJS, Prisma, and PostgreSQL, contributing to core product modules and backend feature development.
- Built backend functionality for the AI Trip Planner, Discovery, Search, and location-based systems, handling traveler preferences, itinerary generation and persistence, trip validation, filtering, search logic, and stays/experience integrations.
- Debugged complex issues across APIs, NestJS services, Prisma, and PostgreSQL, resolving migration conflicts, schema inconsistencies, database issues, and frontend-backend integration problems.

Projects

Precursa – AI Maritime Logistics Monitoring & Risk Platform

- Architected a FastAPI backend with 16 REST endpoints for shipment risk scoring, vessel snapshots, weather enrichment, route analysis, rerouting, risk intelligence, and dashboard aggregation.
- Integrated 4 external intelligence sources – AIS, weather, news, and Gemini – with PostgreSQL/SQLite persistence, authentication, graceful degradation, and configurable background processing.
- Engineered deployment-ready services using Docker, Docker Compose, and Render, with health, liveness, readiness, and system-observability endpoints plus lazy ML model loading.

KAVACH – Dual-Vector AI Fraud Shield & Threat Fusion Platform

- Architected an asynchronous FastAPI backend with binary WebSocket streaming for real-time audio/SMS fraud detection, achieving sub-200ms ML inference latency using PyTorch and scikit-learn.
- Designed asynchronous streaming and inference workflows for deepfake and phishing detection, processing incoming payloads through real-time ML pipelines.
- Built 69 automated tests and Dockerized backend services to validate core workflows and improve reliability and deployment consistency.

EduPlan – ERP Attendance Analytics & Absence Optimization Engine

- Automated ERP data extraction and attendance analytics using Python and Selenium, applying academic eligibility constraints across 500+ student schedule checks.
- Developed rule-based scheduling workflows to analyze attendance data and calculate permissible absence budgets while maintaining academic eligibility.
- Automated repetitive attendance analysis workflows, reducing manual effort involved in evaluating student attendance and scheduling constraints.

Technical Skills

Languages: TypeScript, JavaScript, Python, C++, C, SQL

Backend Frameworks: NestJS, Node.js, Express, FastAPI, REST APIs, WebSockets

Databases, Caching & Messaging: PostgreSQL, Prisma ORM, MongoDB, Redis, Apache Kafka

Developer Tools: Git, GitHub, Docker, Docker Compose, Linux, Postman, Pytest

Core Competencies: Backend Development, API Design, Database Design, System Design

Certifications & Awards

- 62nd Position (Top 1.4%): National Entrepreneurship Challenge 2025 (IIT Bombay)
- 2nd Place Winner: Eureka! Business Model Competition (E-Cell IIT Bombay)
- Certifications: Building with Claude API (Anthropic), Claude Platform 101, OpenAI Workflows
